Cyclic Rotation

Pseudo code

```
Function Rotate(list, #of rotations):
    if length(list)≠0:
        for length of #of rotations:
            temp num = list[-1]
            list.remove(-1)
            list.insert(temp num at 0)
    return list
```

Frog jme

Pseudo code

```
function jme(X,Y,D):
    dist to go = Y-X
    num of times = dist to go/D
    num of times = round up (num of times)
    return num of times
```

PermCheck

PseudoCode

function Solution(list);
perm=true
runningtotal=[]
for lengthoflist;
if list[currentloop] in runningtotal or list[currentloop] > lastelement
perm=false
Break
else;
runningtotal.append(list[currentloop])
ifperm=true;
return1
else;
return0

Frog river one

pseudocode

function Solution(Array, location);
runningtotal=[]
for length(Array);
if Array[loop#] not in runningtotal and Array[loop#] ≤ location
runningtotal.append(Array[loop#])
if length(runningtotal)=location;
return loop#-1 ;earliest
stop to location

Packing Carsin

Pseudo code

```
function solution(list)
    total=0
    for x length(list):
        if list[[loop]]=0:
            for y length(list)-x:
                if list[(x+y]=1:
                    total +=1

return total
```
